Regarding claim 1, Li et al. teaches a system comprising a security management system comprising:

Art Unit: 2136

- A network security feedback and control system wherein said security feedback and control system receives a plurality of normalized events and issues at least one normalized command in response to a predefined event in said plurality of normalized events (paragraph 0022-0023).

Regarding claim 2, Li et al. teaches wherein said security feedback and control system comprises a feedback and control manager wherein said feedback and control manager processes said at least one normalized event and generated said at least one normalized command (fig. 3, ref. num 340).

Regarding claims 3 and 13, Li et al. teaches wherein said feedback and control manager includes at least one rules engine wherein said rules engine includes a rule having a condition object that uses information from said at least one normalized event (fig. 3, ref. num 350).

Regarding claim 4, Li et al. teaches further comprising a managed node coupled to said security management system (fig. 1, ref. num 113).

Regarding claim 5, Li et al. teaches wherein said managed node further comprises a security management agent executing on said management node (fig. 1, ref. num 120).

Regarding claim 6, Li et al. teaches further comprising at least one managed product coupled to said security management agent wherein said at least one managed product forwards at least one of said normalized events to said security management agent and receives normalized commands from said security management agent (fig. 2, ref. num 254).

Regarding claims 7 and 14, Li et al. teaches further comprising a security management agent coupled to said network security feedback and control system wherein said security management agent collects normalized events and forwards said normalized events to said security management system (fig. 2, ref. num 254).

Regarding claims 8 and 15, Li et al. teaches further comprising at least one managed product coupled to said security management agent wherein at least one managed product transfers at least one normalized event to said security management agent (fig. 2, ref. num 240).

Regarding claim 9, Li et al. teaches a system comprising:

- An event subscription filter (fig. 2, ref. num 220); and
- A feedback and control manager coupled to said event subscription filter (fig. 2, ref. num 240).

Art Unit: 2136

Regarding claim 10, Li et al. teaches further comprising a knowledge database coupled to said feedback and control manager (paragraph 0013).

Regarding claim 11, Li et al. teaches further comprising a directory coupled to said feedback and control manager (paragraph 0013).

Regarding claim 12, Li et al. teaches further comprising a configuration adapter connected between said feedback and control manager and said directory (fig. 1, POLICY DATA INTERFACE).

Regarding claims 16-18, Li et al. teaches a method/computer-program product/structure comprising:

- Receiving events from managed products by a network security feedback and control system (fig. 2, ref. num 230 and 240); and
- Using information in said events by said network security feedback and control system in dynamically implementing a predefined security policy (fig. 2, ref. num 250 and 252).
